DETAILED ACTION

1. This office action is responsive to communication filed on 03/02/2004. Claimed priority is granted from provisional application No: 09151530 with a priority date of 09/11/1998.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a non-statutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Art Unit: 2143

3. Claims 1-9 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 1-9 of U.S. Patent No. 6701354. Although the conflicting claims are not identical, they are not patentably distinct from each other. In the context of accessing product information over a network, and specifically to associate a product with a tool as claimed, the most logical product indicia to utilize when tracking a product is the product identifier. The system discloses a tool that comprises a scanner used to read information associated with the product. Thus, an ordinary skill in the art would recognize that using a scanner to read "product information" from indicia associated with the product and using the same scanner to read "product identifier" from indicia associated with the product, would have predictably yielded to similar results.

Furthermore, in lines 5 and 6 of claim 1, "a tool having a unique ID that is fixed to the tool "in the U.S. Patent No. 6701354 is substituted for "a tool having a unique ID that is in a fixed relationship to the tool" in the current application in order to bring clarity to the claim language, and adds no new element to the claim.
